The Benefits of Clearshield Eco-Glass®

The image is a side-by-side comparison of two glass surfaces. The left side, labeled 'ORDINARY GLASS', shows a dark, textured surface with many small, dark spots and streaks, suggesting dirt or limescale buildup. The right side, labeled 'CLEARSHIELD ECO-GLASS®', shows a much clearer, smoother surface with visible water droplets and a grid pattern, suggesting it is clean and resistant to contaminants.

ORDINARY
GLASS

CLEARSHIELD
ECO-GLASS®

Unique 'non-stick', easy clean technology

Saves cleaning time and effort.

Resistant to limescale and other contaminants

Keeps the glass looking like new for longer.

Proven durability, up to 10 year warranty

Long-lasting protection for peace of mind.

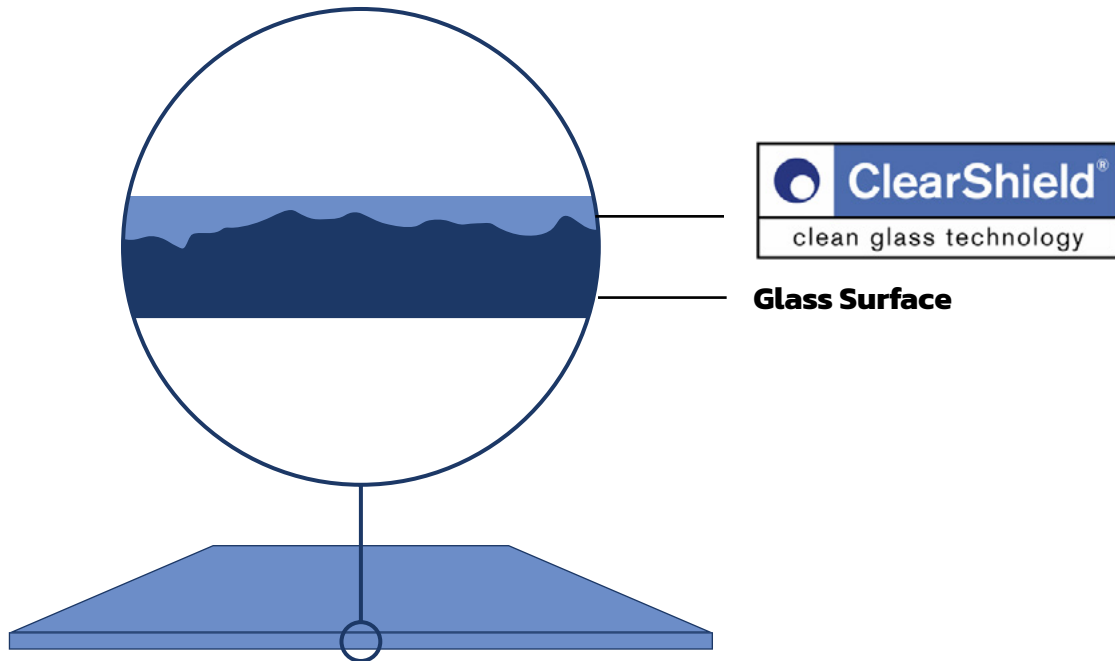

Eco-Friendly after-care products

No more harsh and abrasive cleaning products

Independently proven to resist bacterial adhesion

Create a more hygienic environment

How Does Clearshield® Work?

Ever wonder why your glass fades and becomes foggy over time, even after a thorough cleaning? The surface of glass is imperfect. These peaks and valleys create the opportunity for bacteria, mold & mildew, limescale, soap scum, and more to adhere to the glass and be extremely difficult to remove.

Clearshield fills these imperfections to create a smoother surface on a microscopic level. Our liquid polymer forms a molecular bond with the glass that forms a durable, invisible surface that lasts for many years. `
